

CLAIMS

We claim:

sub.a2 1. Security system for reporting of intruder detection place through a communication line, said information being obtained from a camera device fixed in a specified place wherein:

several camera devices are installed for monitoring said specified place;

said system has a communications device that can be connected to said camera devices and said communication line including an internet line, and a server means to be connected to said communication device through said internet line means;

said camera devices constantly monitor for intruders in said specified place, where said camera device can establish a connection with said communication device when said intruder is detected and send an unusual status reporting signal and image data to said communication device; and

said communication device is constructed so that said communication device establishes communication with said server means only when said communication device has received said unusual status reporting signals, and collects said image data received in specified units to send to said server means.

2. Security system as described in claim 1, wherein said communications device is constructed such that units of said image data corresponding to said specified place are sent to said server means, and said image data are automatically deleted.

3. Security system as described in claim 1, wherein the units of said image data in a specified place include several items of image data obtained from one of said multiple-camera devices at different times.

4. Security system as described in claim 1, wherein the interconnections between said camera devices and said communication device are formed by a power source line or by wireless means.
5. Security system as described in claim 1, wherein said server means provides image information based on said image data to a specified web site.
6. Security system as described in claim 1, wherein said server means reports to a terminal that has been registered in advance when said image data has been received.
7. Security system as described in claim 6, wherein said reporting is performed using the internet line means.
8. Security system as described in claim 1, wherein said camera devices can also detect voice information, combine voice data based on said voice information with said image data, and transmit combined data.
9. Security system as described in claim 1, wherein said server means includes a web server means and a data base server unit.
